Earthmom's™ Guide To EASY, CHEAP And FUN Home Hydroponics 5 Projects You Can Make NOW To Get Started Growing Your Own Food!

Synopsis

Learn to grow your own food nearly anyplace with very little money and up to 90% less water! Even off-grid, hydroponics can be used to grow fresh, healthy, living food! Learn through these 5 projects how to REgrow what you currently are throwing away; how to use a non-circulating planter to grow in water; how to build your own hydroponic grow bed; and how to begin growing in containers that have previously been thrown away. This inspirational guide includes links to more information online and makes the process of self-sufficient food growing fun, easy and cheap!

Customer Reviews

I just love this book. It definitely inspired me to to grow and regrow in new ways. I have been considering growing inside hydroponically for quite some time. I have been on the fence about how to go about making an affordable hydroponic grow system. I am gonna go with the hydroponic grow bed in this book. It has instructions and pictures. This book has a lot of neat planting ideas. It is well written with easy to understand instructions. It also contains many helpful links. I highly recommend this book to anyone that gardens or wants to garden, especially if you have limited space. You will

find many handy ideas in this book without the high price. This book is very enjoyable to read and a great value. Money well spent! Hats off to the author.

I loved this book, especially the parts towards the front with the simple projects. I am already "regrowing" green onions, and am getting some of the Kratky method planters started. There are a lot of variations of it on You Tube also if you search for Kratky hydroponics. If you are like me, interested in hydroponics, but not wanting to mess with elaborate (expensive) systems or electricity (my little outdoor greenhouse doesn't have any), this book is for you. I may progress to more sophisticated hydroponic systems down the road, but it is really fun to see what you can make out of recycled (food safe) containers and dollar store items. A good starting point for someone wanting to try no-soil gardening.

This book came out just at the right time. I had been thinking about starting a hydroponic garden, but wondered how much it would cost to get all the equipment. Well, with earthmom's guide I found my answer...not much, because she shows you ways to create various types of hydroponic container gardens using items from the dollar store and even things you might have just tossed in your trash!! I read through the book, but have been too busy to try out the projects, though they look easy. Some of the photos were hard to see for me, but that could just be my Kindle or though I don't want to admit it, user error on my part. In any case, even without the images, the instructions are well laid out and geared toward the laymen. I'll update this post once I get a chance to try my hand at hydroponic gardening and been able to eat the vegetables of my labor.

If you or a young one become interested in hydroponics, this is a great place to start. It takes you from the simplest system to a moderately complex system and you learn what is happening and why. It is fun to boot! Also this is a nice source of home science projects for kids.

I can't wait to take earthmoms advice and scavenge around the house for components to start a hydroponic experiment tomorrow a.m. The book was "just big enough" to help a gardener understand the how and why of this system. It was clear, detailed and full of helpful links and resources. I'm getting several copies for my gardening pals. Thanks for the inspiration & guidance.

As a beginner in Hydroponics.....I thought this book was interesting. It also had some fun inexpensive projects to try with your family or grandchildren. I have only read 3 chapters so far but

like what I see. It makes you want to try different ways of gardening indoors.

Awesome!!!

I had to stop reading the book to put my celery in water and start my hydroponics seeds! I can wait to build more of her projects.
