# **Customer Reviews**

This book helps me to grow plants in my hydroponic garden, so that, I can get all of the foods that I love. I found this system well as it accomplished without using soil. This book provides me with all the techniques and information needed to start with hydroponic system instead of natural method of gardening. Fresh foods are always the most expensive commodity in the supermarket. I wonder how people got their options on quick and ready to do foods. But health problems is at risk unless, you learn how to make and cultivate a good harvest and produce! This a great book on hydroponic farming system.

Hydroponically grown foods not only taste better and are more nutritional, you can change the properties of your food, monitor what goes into your food and pollutes less. You can also grow more in less space. This is especially great for those of us that do not have a backyard to grow in. With the right plant selection, you can also keep pests away. I plan on planting a citronella plant - not only do I like the smell of citronella plants, but their oils keep away mosquitoes and other pests. Book is the best!!

Author also discusses the particular problems of soulless gardening in terms of pest control and weather and light conditions. This book is brilliant for anyone who loves gardening! It provides a step-by-step guide on creating and maintaining an organic garden. There's plenty of tips and useful information inside to show you how to care for the various fruits and vegetables. Itâ Â<sup>TM</sup>s great to learn about hydroponics with this book.

This book provided me proven steps and strategies on how to successfully build my own hydroponics system. and also it was a help me to understand the underlying concepts of its different systems. Hydroponics needs water as the main component, you $\tilde{A}\phi\hat{A}$   $\hat{A}^{TM}$ d need to be as meticulous

in choosing the right type as with soil. First of all, you cannot simply collect water from the tap. It is definitely a must read!

This textbook is one of the best and most comprehensive hydroponic information sources available. This is an excellent book for anybody considering the commercial applications of hydroponics. It covers in detail different hydroponic methods and discusses the differences, advantages, and disadvantages of each. Well illustrated and includes a complete bibliography. Excellent!

Plants may have the nutritional deficiencies just like we humans do and we should study all about that in order or get prepared to tackle with any such problem. The step by step instructions and helpful tips and advice provided in this book will make you an expert in hydroponic gardening in no time. I found this book is really helpful. It contains all the information you could need to get started, and make a successful system. It has explained everything about Hydroponic Gardening and the steps are easy to understand and follow. The best way to choose your plants is to look at what grows locally if you are not working in a climate controlled environment.

I ordered this book based on the amount of positive reviews it had already received. The book goes into the theory and science of Hydroponics and it delves into several different design options. The perfect overview with good details in each section. It's very well written for a person wanting to raise their own fish/vegetables together. It has helped us with every step in the process, we currently have set up our first grow bed and are working out the kinks. Would recommend it to anyone thinking about getting into hydroponics.

I've always been fascinated with the idea of gardening but I just don't have any space for it. This book is a very good beginners resource to Hydroponics. It contains great strategies on how to successfully build your own hydroponics systems, as well as help us understand the underlying concepts of its different systems. Also it's good to know that you can just implement this kind of gardening system on your own residential area. Great guide to have on your hands, as it explains proven steps on how to successfully build your own hydroponics system.
