Geologic History Of The Feather River Country, California

Synopsis

How did the Sierra Nevada and adjacent lands come to be the size and shape they are today? This book covers 400 million years of physical evolution in a language understandable to nonscientists, tracing the volcanic activity, the folding and building of mountains, the breaking of blocks along fault lines, and the work of erosion and glaciers that have created today's dramatic landscape. Cordell Durrell spent a lifetime reading this complex story of movement and change in the rocks of the Feather River country. He shares with readers the excitement of discovering by remote but careful inference what must have happened millions upon millions of years ago. The basic methods of geologic analysis that Durrell describes can be applied anywhere on the earth's surface, lending new fascination to our travels throughout the frozen arctic, dry deserts, tropical rainforests, low swamps, and high mountains like California's magnificent Sierra.

Book Information

Paperback: 352 pages

Publisher: University of California Press (February 25, 1988)

Customer Reviews

Although the Sierra Nevada range is a fairly simple fault block mountain system in most folks' minds, the details of its evolution over millions of years are quite complex and interesting. Cordell is a long-time student of these mountains, especially the northern terminus. The book is intended for the general reader and begins with an introduction to some basic geologic premises. Most of the text is about the area of the title and will be of interest to anyone residing in or visiting the area. The illustrations are numerous and include drawings and photos. Recommended for libraries in the region. R.G. Schipf, Univ. of Montana Lib., Missoula

Great, informative

Excellent and very detailed if you have a background in geology or are very interested. Perhaps slightly dated; published in 1987. Printed quality of photos is low but they are still useful.

Excellent.

Nice geo book for the Northern Sierra. I hope to visit many of the sites listed this summer. A good read.
