Who Built The Moon?

Synopsis

The authors of Civilization One return, bringing new evidence about the Moon that will shake up our world. Christopher Knight and Alan Butler realized that the ancient system of geometry they presented in their earlier, breakthrough study works as perfectly for the Moon as it does the Earth. They found a consistent sequence of integer numbers that they can apply to every major aspect of the Moon; no such pattern emerges for any other planet or moon in the solar system. In addition, Knight and Butler discovered that the Moon possesses few or no heavy metals and has no core—something that should not be possible. Their persuasive conclusion: if higher life only developed on Earth because the Moon is exactly what it is and where it is, it becomes unreasonable to cling to the idea that the Moon is a natural object—an idea with profound implications.

Book Information

Paperback: 272 pages

Publisher: Watkins; New edition edition (February 1, 2007)

Customer Reviews

Christopher Knight has written five very successful books. His first book, The Hiram Key, co-authored with Robert Lomas, was published in 1996 and it immediately went into the UK top ten, bestseller list and remained there for 8 consecutive weeks. It has since been translated into 37 languages and sold over a million copies worldwide, becoming a bestseller in several countries. Alan Butler, a qualified engineer, but always fascinated by history made himself into something of an expert in astrology and astronomy. He has published four successful books on the Knights Templar and the Grail legend. He is also a published playwright and a very successful radio dramatist. They are co-authors of the best selling Civilization One.

I had previously read two other books by Chris Knight -- so was expecting to be impressed. I was not disappointed. The authors present a totally convincing case that the moon cannot possibly be natural -- and must have been engineered, though exactly how this was done remains a mystery. I was surprised that the authors do not discuss the backside of the moon which never faces earth and, thus, appears to be the logical place to look for answers about who, what and how. I also agree with other reviewers who express frustration with the authors, who after succeeding so magnificently in presenting the case for lunar artificiality, then stumble in the final chapters, in which they discount Mr E.T. and try to make a case for time travel that is just silly. I was also puzzled that the authors make no mention of "intelligent design" and "directed panspermia", which was the theory favored by Sr Francis Crick, co-discoverer of DNA, and by Fred Hoyle, the eminent mathematician and astronomer who was right about so many things. Once it is understood that life came (or was brought) to earth from elsewhere, it is not necessary to expect that we will unravel the deeper mystery of how life originally was formed. It is enough to know it happened somewhere, somehow, once upon a time. The authors would have done well to pay closer heed to Hoyle's views about G-d versus Mr. E.T. Point being that the extra-terrestrial civilization that undoubtedly was responsible for installing the moon was/is so far advanced beyond we humans as to appear as gods. This said, our human race, though at a technological and scientific crawling stage, nonetheless regularly produces highly evolved saints such as Krishna and Jesus, beings with a direct connection to G-d. And Mr. E.T. is surely aware of this fact, even if the authors are not. Our human potential for the divine may even be what most fascinates E.T. about us, and why he keeps returning to our planet.

This book really gets into the nuts and bolts of exactly why our moon is NOT a naturally occurring planetary body. A very good read and highly recommended by me as a scientist.

An intriguing narrative. The first chapter maybe too technical for non-math readers - so get the gist and move on. What follows confirms some conclusions I came to independently. It leaves one with the notion that: if the moon was built, then why not the earth. And if the earth too, then why not the whole big shebang. Similar ideas have been voiced in the past, and even expeditions proposed to find the entrance to a "hollow" earth at the north pole. One of my most treasured books. Well argued and presented.

Thrilled with this thesis. Finally a work that combines not only a fantasy, but also a hard research.

Now I anticipate the comeback after we check the dark side of the moon! Thanks to the authors!

Now you have a very good reason to look up at the night sky and pay more attention that our celestial neighbor. Our moon has been behaving very strange lately, and I did not notice it until I read this book. I wonder now, what is the real agenda behind the moon's and the Earth relationship. Let's all wake up and start question everything we have been lied about our solar system. You'll be amazed!!!

The authors make fascinating and convincing arguments that the moon is not a natural satellite and had to be fabricated. Then they completely blow it by summarily dismissing the possibility of extra-terrestrials being the ones who did it! This is incomprehensible to me, especially when you discover the hypothesis they did settle on. How can they not consider the possibility of extraterrestrials as the creators? Pick up a copy of "The Prism of Lyra" by Lyssa Royal and you will get the real answer to the question. Despite this huge mistake, this a must-read.

If you have an open mind than this book is great!! It didnt change my view on the Moon, but opened my eyes to the fact that there is something very odd about the Moon.

Because it is the most intellegent and meaningful book on the relationship of the earth and the moonand the sun. We would not be here except for the moon and the effect it has had on our planet.It's origin and singnificance is beginning to register with the sicientific community and they arebeginning to see the pattern of God's creative influence on the Universe.
