World History

IN 50 EVENTS

From the Beginning
of Time to the Present

JAMES WEBER

Synopsis

Do you want to learn how our planet and the life on it became what they are today? Read about the 50 most important events in world history, from the beginning of time to the present day. This book is perfect for history lovers. Author James Weber did the research and compiled this huge list of events that changed our planet's history forever. Some of them include: - The Big Bang (13.8 billion years ago)- First Life on Earth (3.7 billion years ago)- The Era of the T-Rex (68 million years ago)- The Cretaceous "Paleogene Extinction that killed the Dinosaurs (65 million years ago)- The Yellowstone Supervolcanic Eruption (640,000 years ago)- The Last Mammoth on Earth (4,500 years ago) and many many more. The book takes you through the most important events on Earth over the last 3 billion years. You will find pictures and explanations to every event, making this the perfect resource for students and anyone wanting to broaden their knowledge in history. Note: If you are looking for a book on world history from a human perspective, be sure to check out Human History in 50 Events. Download your copy now! Customer Reviews

This book is perfect for anyone trying to get a grip on all of history in a concise book that just flies through it all. The book does a great job of choosing the most exciting 50 points in history and then gives you all the information you need to fully understand why these points in history are so important. I already enjoy history, but this book was a lot of fun reading through and I know I learned a lot. This book is great for students or anyone just curious about our magnificent history!

Great book! It's basically a simplified version of the history. I love how the author summarized the events in short paragraphs but was still able to deliver the gist. It's a very difficult thing to do especially when dealing with vague subjects like history. I'll recommend it to anyone who wants to know about our history in one reading. It's very simple and concise and it's not boring to read. Kudos to the author.

This book has ambition, but it is too short to provide many details about such a huge time period. It starts with the creation of universe and continues to the present time. It is a scientific point of view so you have forming on the solar system, Earth, first organisms, dinosaurs, beginning of man and so on. I like when the author knows how to skillfully summarize major points and make it interesting, but I would really love a bit longer book with more details.

World History is one of my favorite subjects when I was in school. When I found this book, I got so excited to read it and I was amazed that it has the 50 events in it that was explained in shorter version but complete. This book would really be helpful for my daughter and for other students out there.

This book is a very easy read. It gives the highlights in 50 events that will give a person knowledge of knowing just how the world came into being and evolved on billions of years and not how it was created in the beginning of geneses.

This book offers an overview of the most important events to shape our world and the life forms that have previously lived or currently survive here. Starting right back at the big bang some 13.8 billion years ago, the book covers every major event up to the extinction of the dodo only 327 years ago

and is a wonderful reference tool for putting these historic events in an understandable order. With it providing a snapshot view of these events from such a vast period in one, concise book, it really helps put issues like global warming into perspective and to see that, actually, our world has always been, and continues to be, a place of change.

Great History book. This writer has an extraordinary ability with words, that special ability to paint feelings so delicately, you are not aware that you have been touched until the end of the passage. And often I would have to pause before reading on, to wonder at the effect the words have had on me. I have never experienced that kind of thing in a book before, and I have read all my life. I'll never forget this delicate and sensitive work. Highly recommended

How the world was formed has been a mystery and no one can explain it fully. This book somehow tries to compile scientific facts that could explain how the world we live in has been formed. These are really interesting and relevant scientific findings about our beloved earth. For those who are questioning on how our world begun then this is the book for you. It will surely satisfy your curiosity. It's a great book and it's very educational.
