Customer Reviews

Really leaves a lot of needed information out. Author talks about targeting specific insects with specific pesticides is what the reader needs to do but fails to give a full listing of insects that are effected. Usually it is ants, roaches, moths or beetles mentioned and then the words and others. Plus if you have ever read any other pest control informationals then you already know what is in this one. Sprays made of liquid dish soap, garlic, essential oils, citrus oils, peppers or tobasco sauce, peppermint or eucalyptus oils and one mentioning of borax mixed with water.

great info

Every spring/summer I have ant problems, they appear from nowhere and spread out throughout the house, I do not want to use pesticides because I have two kids a cat and a dog in the house. I was looking for a book that will help me get rid of the ants without using harmful poisons and this book seems like a real gem. For now using one method I managed to get the ants out of my kitchen, they've been gone for 3 days now, excellent book.

This book is a easy-to-read guide to expunging insects and rodents from your home for good. This book also provides practical solutions that affordable methods that will rid your home of any and all of the unwanted guests. Thank you so much Paul for offering this high quality kindle book!

If you have problems with pest - and want to go the organic way, this is the book for you. You will get all the usual information about the different types of pests and how to deal with them. But what I liked the most about the book was chapter 6, where you are taught how to create your own pest control spray.

Pest attack can ruin months or years of dedicated and hard work. At the same time I want to keep it all natural. So when I found this book I was thrilled! The book gives you a great explanation of the causes and then it teaches you how to have your own organic pest control method!

This was,a very informative read. It went over pest prevention inside and out and also which pests,we need and don't want in our gardens. It gave me a list of organic pesticides I could d purchase along with recipes for pesticides I could make at home. Very helpful because book.

I used it right away! Having been invaded by mice I mixed up the rodent spray and put it to work along with other deterrents. I am happy to have this in my reference library. I am certain it will get plenty of use.
