Frank D. Petruzella has extensive practical experience in the electrical control field, as well as many years experience teaching and authoring textbooks. Before becoming a full time educator, he was employed as an apprentice and electrician in areas of electrical installation and maintenance. He holds a Master of Science degree from Niagara University, a Bachelor of Science degree from the State University of New York College - Buffalo, as well as diplomas in Electrical Power and Electronics from the Erie County Technical Institute.

This book does not come with the LogixPro software that's required to do any of the programming exercises... instead you have to purchase it from the website given in the book. When I went to the

website to try and download the software, my security software blocked the download link on the webpage and marked the executable file for LogixPro as infected with malware! Indeed, I tried to override the security protections around downloading the LogixPro software, but it wouldn't let me (thankfully). The website given in the book to access the software and extra programming examples is not safe, but its the only way to get the requisite software to perform the exercises and access some of the extra learning materials! Be very careful and only use the website for the materials if you have a security suite to protect your computer.

Thought it came with the cd but it didn't

A great referance for anyone learning PLC programming

Good book
