Fruit: Edible, Inedible, Incredible

Synopsis

A remarkable collaboration of nature, art and photography, celebrating the beauty of fruit. The landmark books *Seeds and Pollen* were published in 2006 to rave reviews-with adjectives ranging from "breathtaking" to "spectacular," from "spellbinding" to "dazzling." This companion title examines why fruits exist and how their short lives are critical to the natural order. Visual artist Rob Kessler uses special light and scanning electron microscopy to create astonishing images of a variety of fruits and the seeds they shelter. His razor-sharp cross-sections reveal intricate interiors and pods, pouches, keys, nuts and other examples of botanical architecture. Seed morphologist Wolfgang Stuppy deftly explains the formation, development and demise of fruit. Literary, historical and artistic references to fruit are included as well. Fruit is groundbreaking in its intimate examination of plant reproduction. An essential source and reference for artists, designers and gardeners, this stunning book will fascinate any reader interested in the natural world and biological structures.

Fruit is little short of astonishing. If the book never gets further than your coffee table, it's still likely to blow the stuffing out of anything else laid near it... Reading all of *Fruit* is like a fantastic mini education. Don't feel like reading? Just look at the pictures. They'll take you away. (David Middleton January Magazine 2008-12-21)Bearer of seeds, fruits have an amazing variety of forms that are displayed in high definition images in this exquisite picture book. The striking graphic design of this publication is artwork of the highest quality; images appear to leap out from its shiny black pages... (Chris Smith Seattle Post-Intelligencer 2008-11-27)A mammoth undertaking...pictorially magnificent. (Judy Creighton The Daily News (Kamloops) 2009-01-10)Stuppy divulges the copulating secrets of numerous fruits in a humourous, explicit fashion. (Joel Bentley GardenWise)Amazing images... Up close, many are unrecognizable, appearing to be futuristic landscapes or startlingly human-like sexual organs. Stuppy's thoroughly scientific examination of what makes a fruit a fruit is peppered with amusing observations. (Wendy Thomson GardenWise)Beautiful.... By examining fruit at this [microscopic] level users can gain a better understanding of plant reproduction and how it thrives in the natural world. (Mary Ellen

Snodgrass American Reference Book Annual)A fascinating look at a subject that has baffled botanists for years...The book is pictorially magnificent...Tiny interior structures of plants and seeds are blown up to fill the oversized pages, creating images that are sometimes surreal yet breathtakingly beautiful. (Sonia Day The Toronto Sun 2008-12-13)Fruit is clearly an art book. The images are arresting and the stories fascinating. (Joel M. Lerner The Washington Post 2008-12-13)Fruit is just as visually luscious and insightful into the juicy secrets of some of our world's most delicious fruits. (Linda Stilkowski Winnipeg Free Press 2008-12-07)I recently had the pleasure of spending many long winter hours paging through this book. Randomly opening the book, I would be caught by one of Kessler's striking images, and settle in to read, quickly losing myself in Stuppy's writing... This wonderful, oversized book is the perfect gift for a botanist who appreciates artistic images of plants, or the photographer with a keen botanical enthusiasm. At first glance, it appears to be a typical coffee table photography book; on closer inspection, a botanist finds a compelling text with a refreshing degree of scientific rigor. The authors have intentionally used botanical terms, Latin names, and included taxonomic information that will please botanists who look for beautiful books with technical information... The images are beautiful, and illustrate the minutia that we rarely see with a hand lens or microscope.... Stuppy's text is engaging, and covers most everything you would want to know about fruits, from biology to natural history. (Kurt A. Reynertson, Weill Medical College of Corne Economic Botany, Vol. 64 2011-05-01)

Wolfgang Stuppy is the seed morphologist for the Millennium Seed Bank Project at London's Royal Botanic Gardens. Rob Kessler is a visual arts professor and artist whose work has been shown in museums and galleries in the United Kingdom and Europe.

For the serious plant lover in your life. The photos in here have to be seen. It opens up the tiny world of fruit and the science of seeds. Which I would also highly recommend. 5 Stars.
