I feel this book deserves a much higher score for the information it contains about this under-represented area of gardening. I hate to see a book trashed for odd reasons and would like to elaborate on why I value this book. One reader has a problem with the fact that this book is not for the Four-Corners area. As one who lives in sizzling Phoenix, I can relate to the disappointment of not having books relate to my area. (So few books relate to Phoenix that it's fantastic to find a good one that does.) The description of the book in and on the cover of the book may not have adequately given away it's low-desert content, but that doesn't make it a bad book. If the book had been flipped through at a book store, the buyer would have known whether the book met their

needs. Buying on is a short-cut. The fact that we are giving up our ability to peruse every page is the down side to the ease of purchase and lower prices we pay. Another reader didn't like the fact that everyone in their neighborhood had a copy of this book. Sounds like whoever recommended it was being very responsible in urging water conservation and in steering homeowners toward plants that won't die the first season they are planted. The fact that Phoenix nurseries sell plants that won't live here without excessive babying leads many people down the wrong path. Crispy plants are a disappointing phenomenon that plagues gardeners without sufficient knowledge of the locale. Of all the arguments, the one about the photos being too small is the only one that actually pertains to this book. Yes, the pictures are small. But the book is so good that I'm happy to do a "G00gle Images" search to see what MANY photos of a plant look like before deciding if I want it. To me, detailed information about each plant is of more value than expensive, space-consuming photos. I am a veteran in the publishing business and if the book containing this many plants accompanied by large photos, the expense of the book would be phenomenal. Buyers, give this book a chance -- and remember G00gle Images for an array of photos that will provide greater knowledge of any plant from ANY book.

Most of the flowers featured here seem to be geared towards more traditional gardens. I really was expecting more vegetation that could be easily taken care of in Las Vegas. The most of the plants worked well for me on the front range in Colorado but I think that a lot won't take the heat of lack of water very well in the summer time here.

I purchased this from a few years ago and have referred to it many times a year since then, Whenever I wish to add a new perennial I check out what Mary Irish has to say. In addition the many fine photos in the book show what the plant will look like at maturity. This book and thothers by Mary Irish are essential for successful desert gardening. Mary Irish shares her own personal experiences when she has grown the plant in her own yard or at the Desert Botanical Garden in Phoenix where she worked for many years.

This book is very helpful to the desert gardener. Most of the local garden centers don't have a clue as to what plants will grow in our area, but sell them to you anyway. Mary Irish has taken the guesswork out of what to buy and where to plant items that will flourish here, and thereby saves you a lot of disappointment in your gardening. Thank you very much Ms Irish for this book.

Another winning book by author Mary Irish! I have several of her books, and the style and information within is wonderful. The first part of the book includes designing your landscape, as well as garden prep, the care of perennials and disease/pests. Much of the information relates to plant care in general, so it's a great benefit for any gardener. Add to that the pages upon pages of recommended perennials, with color photos, and it makes for a great reference book for the arid gardener.

This is an EXCELENT BOOK. Few things meet and exceed my expectations. This book did. I have recommended to all my friends in the Native Plant Society. Both the information and photos are outstanding. Cecil
