The Great Acceleration: An Environmental History Of The Anthropocene Since 1945

Synopsis

The Earth has entered a new age—the Anthropocene—in which humans are the most powerful influence on global ecology. Since the mid-twentieth century, the accelerating pace of energy use, greenhouse gas emissions, and population growth has thrust the planet into a massive uncontrolled experiment. The Great Acceleration explains its causes and consequences, highlighting the role of energy systems, as well as trends in climate change, urbanization, and environmentalism. More than any other factor, human dependence on fossil fuels inaugurated the Anthropocene. Before 1700, people used little in the way of fossil fuels, but over the next two hundred years coal became the most important energy source. When oil entered the picture, coal and oil soon accounted for seventy-five percent of human energy use. This allowed far more economic activity and produced a higher standard of living than people had ever known—but it created far more ecological disruption. We are now living in the Anthropocene. The period from 1945 to the present represents the most anomalous period in the history of humanity’s relationship with the biosphere. Three-quarters of the carbon dioxide humans have contributed to the atmosphere has accumulated since World War II ended, and the number of people on Earth has nearly tripled. So far, humans have dramatically altered the planet’s biogeochemical systems without consciously managing them. If we try to control these systems through geoengineering, we will inaugurate another stage of the Anthropocene. Where it might lead, no one can say for sure.

Book Information

Paperback: 288 pages

Publisher: Belknap Press: An Imprint of Harvard University Press (April 4, 2016)

Language: English

ISBN-10: 0674545036

ISBN-13: 978-0674545038

Product Dimensions: 0.8 x 5.5 x 8 inches

Shipping Weight: 12.8 ounces (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 4 customer reviews

Best Sellers Rank: #28,199 in Books (See Top 100 in Books) #22 in Books > Politics & Social Sciences > Politics & Government > Public Affairs & Policy > Environmental Policy #47 in Books > Science & Math > Environment > Environmentalism #64 in Books > Politics & Social Sciences > Social Sciences > Human Geography

Customer Reviews

Among the first scholarly works to make explicit use of the geological framework of the Anthropocene for the purpose of rethinking the grand narratives of global economic change. (Fredrik Albritton Jonsson Public Books 2016-12-01)

J. R. McNeill is University Professor in the Department of History and School of Foreign Service at Georgetown University. Peter Engelke is a Senior Fellow at the Strategic Foresight Initiative at the Atlantic Council in Washington, DC.

J.R. McNeill's earlier book, "Something New Under the Sun", was an historian's refreshing outlook on aspects of the environment we live in. This time around, McNeill and Peter Engelke have coauthored "The Great Acceleration, An Environmental History of the Anthropocene since 1945". Once again, the authors address different aspects of the environment from an historical perspective. In this style, they have made important science accessible for lay readers like myself. Well done!

Once again a remarkable book from my favorite author, McNeill.

Yup

Came in great condition.
