Customer Reviews

I have grown herbs in containers and in the ground for decades. I have grown them in a variety of climates from temperate to cold to hot. I picked up this book to see if Martha Green had insights that

I had not yet discovered. While that was not the case, it is because I have gone through many trials and errors to achieve success with my herbs. If I had had Ms. Green's book to begin with, I think my learning curve would not have been so long. The herbs that she covers include commonly grown ones as well as a few surprises. Here is what is covered in this book: Anise, Basil, Borage, Chamomile, Chives, Cilantro, Dill, Fennel, Lavender, Marjoram, Mint, Oregano, Parsley, Rosemary, Sage, Savory (Summer), Stevia, Tarragon, Thyme and Watercress. I had not thought of trying Watercress, so that will be an add-on in my garden. The advice she offers is solid with directions for growing from purchased container plants to (when possible) growing from seed. She gives advice on potting soil and add-ons which will help your herbs grow. There is also a chapter on commonly made mistakes which would have helped me considerably early on. While the book is excellent as-is, improvements to the book (or in a future one) might be to identify whether a plant is perennial or annual (comes back year to year or grows only for a season) and include information about how herbs fair in various climates (I can't grow dill outside in my hot climate.) Most of my herbs I have had in large containers at my current house for more than five years. Currently, the only ones I have to replace each year are basil, Asian celery leaves, and Italian flat parsley (though the last is supposed to live two years, mine seem to only last through one growing season "perhaps the heat.") A section of how to care for older perennials would also be very useful.

A wonderful little read for beginner herb gardeners. At first, I thought it would be too "kindergarten", and was delightfully surprised with each of the herbs; there were in each section information tidbits that I did NOT know, making this an interesting and useful book. My very favorite part was the last chapter. with major cautions for beginner herbalists.....make sure your pH is right. plant this distance apart, right amount of sunshine, "one size in this case, does NOT fit all".....give your herbs the individual attention they crave, to have Herbs that thrive! Nice book...Highly recommended .

This is well written and gets straight to the point. It does not distract from the facts themselves and is perfect for those new to herb gardening and as a review for those with more experience

I love to grow herbs and this book is helpful to grow them in pots or in the kitchen. I have a large outside herb garden, this book helped me choose which would do best inside.

Great book especially if your just starting out. Helps you out with everything from the best soil to use, to what types of herbs grow best indoors.

Each herb is described in great detail and how to integrate it to everyday life. I hope to use it soon and have it close to my kitchen.

Good read. Recommend

free book, helpful info
